

ANAKAM.TFA[®] VALIDATED ON IBM HEALTH INTEGRATION FRAMEWORK

**CERTIFIED “READY FOR IBM TIVOLI SOFTWARE” AND
“READY FOR IBM DB2 DATA SERVER SOFTWARE”**

Statement of Fact, June 28, 2010

Anakam validated Anakam.TFA, Two Factor Authentication application on IBM’s Health Integration Framework (HIF) on June 28, 2010. The IBM Health Integration Framework (HIF) validation is the official offering through which selected business partner products are designed, tested, and validated for ease of use with HIF. Anakam is currently the only authentication vendor in the IBM HIF program. IBM developed the HIF validation offering to leverage its worldwide leadership in supplying solutions to the Healthcare industry. IBM HIF provides healthcare specific reference architectures, and a suite of tools, transformation engines, and application adapters built on healthcare standards - such as HIPAA EDI, HL7, and IHE integration profiles - which can help reduce development time, lower costs, and advance patient care.

The Anakam flagship application, Anakam.TFA[®] Two Factor Authentication has met the requirements and is IBM Certified Ready for IBM Tivoli Software and Ready for IBM DB2 Database Server. The "Ready for IBM" programs are designed for independent software vendors and solution integrators to validate their products for compatibility, stability, and operation with IBM products. These designations show that Anakam.TFA has passed IBM's high standards of testing and validation to meet or exceed IBM compatibility criteria and successfully integrate with IBM Tivoli Software products and IBM DB2 Data Server software.

About Anakam

Anakam is a global leader in multi-factor authentication, identity proofing and user verification technologies. Anakam enables cost-effective strong authentication and identity management across an entire enterprise – customers, business partners, and employees. With tens of millions of end users, Anakam’s software quickly deploys within the enterprise or in the cloud. Anakam is unique in the industry, providing progressive multi-channel capabilities that enable secure, trusted eBusiness to very large user-communities in a single platform. The Anakam Identity Suite, includes two-factor authentication, professional credentialing, secure collaboration, remote identity proofing and verification.
